

Press Release

New Book on Information-Physics Releases the Same Day as the White House's Genesis Mission Announcement

Author Ra Jordan released *The Omega Civilization: An Answer for Everything* on November 24, 2025 — the same day the White House announced its Genesis Mission initiative. The timing places the book's release alongside a major national announcement focused on advanced physics, quantum science, and AI-accelerated research.

The Genesis Mission establishes a coordinated Department of Energy effort integrating supercomputing resources, quantum tools, advanced materials research, and AI-powered discovery platforms. Several of the initiative's stated research priorities overlap with themes examined in the

book.

“I spent months exploring how AI, precision measurement, and information-first physics could drive a new era of discovery,” Jordan said. “Learning that the Genesis Mission was announced the same day the book was released highlighted how quickly these ideas are entering the broader national conversation.”

The Omega Civilization outlines a ten-phase roadmap describing how information-first physics could shape future scientific progress.

About the Author

Ra Jordan is an independent researcher and writer focused on information-first physics, AI-assisted discovery, and scientific futures.
